

the *Ejector* screw

No pre-drilling or pre-countersinking required

a simple one step process for all

Tropical Hardwood Decks

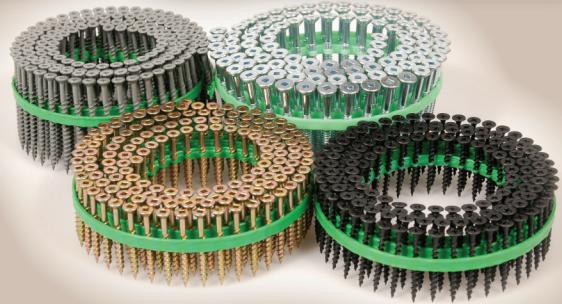

Patented Stainless Steel Screw

Muro's "Ejector" screws make the fastening of all types of Tropical Hardwoods (docks, decks and boardwalks) a simple one step process. No pre-drilling or pre-countersinking is required.

Muro's patented "Ejector" screws have a specifically designed point that pre-drills and ejects the wood material as the screw is being driven. Once the screw is all the way into the substrate custom designed cutting nibs allow the screw head to be countersunk automatically, leaving a clean finish.

"Ejector" screws come in coils and are loaded in seconds... save time and no lost or dropped screws saves you money.
